BLANKE DISK

BLANKE DISK is a revolutionary waterproofing system made of polyolefin foam that does not require tile adhesive to bond with the substrate. Much of the damage caused by moisture results from badly-installed sealing, and mostly occurs in the transitions from the wall to the floor, or by leaking overlaps. Impossible with BLANKE DISK! The full-surface adhesive with flush-fitting interleaving overlapping joints is 100% watertight. The composite sealing can be glued directly to floors and walls. Large format tiles can subsequently be laid without problem, and without the need to wait.

ETAG 022 proved!*

Advantages:

- Highly flexible crack-bridging and watertight composite sealing
- No drying time, can be walked on immediately and is ready to lay for floor and wall coverings
- No leakage around butt joints, no moisture damage
- Extremely level for joints, also suitable for large format tiles
- Complete range with detailed solutions

Important note:

With building authority certificate

Important note:

BLANKE DISK is suitable for indoor use only.

Important note:

BLANKE DISK PRIMER is suitable for use when repairing damaged waterproofing membranes as well as a priming coat for substrates, if these still contain an increased amount of residual moisture.

*Fulfills the requirements of the European ETAG 022.

BLANKE DISK

WATERPROOFING MEMBRANE WITH BLANKE DISK TOOL

PU: 1 roll
